To keep the job from ending, the program or script typically does its work inside an endless loop. If the job does end, you can restart it. Starts only when triggered manually or on a schedule.

Add a virtual machine scale set : Incorrect Choice

A virtual machine scale set allows you to deploy and manage a set of identical, autoscaling virtual machines. You can scale the number of VMs in the scale set manually. You can also define rules to autoscale based on resource usage such as CPU, memory demand, or network traffic. It will not increase the slowness of the apps.
